

POULTRYWISE

Poultry Farming Guide for Beginners

A Practical Guide to Successful Poultry Farming & Profitability

© 2026 PoultryWise Knowledge Series

A Professional Guide for Modern Small and Commercial Poultry Farmers

Table of Contents

Chapter 1: Introduction to Poultry Farming

Chapter 2: Choosing Broilers or Layers

Chapter 3: Housing & Equipment

Chapter 4: Chick Management

Chapter 5: Feeding & Nutrition

Chapter 6: Vaccination & Disease Prevention

Chapter 7: Daily Farm Management

Chapter 8: Record Keeping

Chapter 9: Cost & Profit Calculation

Chapter 10: Marketing & Business Growth

About This Book

This guide is designed to serve as an authoritative resource for farmers starting or scaling their poultry operations (Broilers & Layers). The content integrates FAO technical standards with practical, real-world farm management practices.

Chapter 1: Introduction to Poultry Farming

Poultry farming is one of the fastest-growing and most profitable agricultural sectors globally and across Africa. Because poultry meat and eggs are vital sources of dietary protein, the demand continues to rise daily.

Why Poultry Farming is Profitable:

- **Fast Returns:** Broiler chickens reach market weight within 6 to 8 weeks.
- **Daily Income Stream:** Layer chickens start laying eggs around 18–20 weeks and continue for up to 72–80 weeks.
- **Low Space Requirement:** Compared to other livestock, poultry farming requires relatively small land areas.

Chapter 2: Choosing Broilers or Layers

Choosing between broilers and layers depends on your local target market, available capital, and desired timeline for return on investment.

• Time to Revenue

- 6 – 8 weeks
- 18 – 20 weeks (start laying)

• Capital Requirement

- Moderate, fast turnover
- Higher initial investment (longer growth period)

• Market Strategy

- Batch sales
- Regular daily cash flow via egg sales

Feature	Broilers (Meat Birds)	Layers (Egg Producers)
---------	-----------------------	------------------------

Chapter 3: Housing & Equipment

Poultry housing structures vary based on the management system. Proper housing protects birds from temperature extremes, rainfall, drafts, and predators.

Key Housing Considerations:

- **Ventilation:** Adequate airflow is essential to prevent respiratory infections.
- **Litter Management:** Use clean, dry wood shavings or sawdust to absorb moisture effectively.
- **Essential Equipment:** Feeders, drinkers, and brooding heat sources.

Chapter 4: Chick Management

The first two weeks of a chick's life are critical. Poor management during brooding often results in high mortality rates.

Brooding Steps:

1. Clean and disinfect the pen 2 days prior to chick arrival.
2. Maintain temperatures between 32°C and 35°C during the first week.
3. Provide water mixed with glucose or electrolytes upon arrival to reduce travel stress.

Chapter 5: Feeding & Nutrition

Feed accounts for roughly 70% of total operational costs in poultry production. Understanding proper nutritional stages is vital to success.

Broiler Feed Schedule:

- **Starter Feed:** Weeks 0 – 3 (high protein for rapid growth).
- **Finisher Feed:** Weeks 4 – 8 (energy-dense feed for weight gain).

Layer Feed Schedule:

- **Chick Mash:** Weeks 0 – 8.
- **Grower Mash:** Weeks 8 – 16.
- **Layer Mash:** Week 16–18 onwards (rich in calcium for strong eggshells).

Chapter 6: Vaccination & Disease Prevention

Biosecurity measures and strict adherence to vaccination schedules protect your flock from devastating disease outbreaks.

- Day 1
- Marek's & Newcastle (HB1)
- Spray / Eye drop
- Days 7 – 10
- Gumboro (IBD)
- Drinking water
- Days 14 – 18
- Newcastle (LaSota)
- Drinking water
- Days 21 – 24

- Gumboro (Booster)
- Drinking water

Age	Vaccine	Route
-----	---------	-------

Chapter 7: Daily Farm Management

Routine daily operations include:

- Inspecting flock health early in the morning before feeding.
- Isolating sick birds and removing mortalities immediately.
- Washing and sanitizing drinkers before refilling with fresh water.
- Monitoring room temperature and relative humidity.

Chapter 8: Record Keeping

A farmer without records operates in the dark. Accurate record keeping is essential for calculating profits and tracking farm performance.

Key Records to Track:

- Initial flock count and daily mortality.
- Daily feed consumption.
- Daily egg collection rates.
- Farm expenses and revenue.

Chapter 9: Cost & Profit Calculation

To calculate farm net profit, use the standard formula:

$$\text{Profit} = \text{Total Sales Revenue} - (\text{Feed Costs} + \text{Medication Costs} + \text{Overhead Costs})$$

Feed Conversion Ratio (FCR):

$$\text{FCR} = \text{Total Feed Consumed (kg)} / \text{Total Weight Gain (kg)}$$

A lower FCR indicates that feed is being efficiently converted into body mass.

Chapter 10: Marketing & Business Growth

Developing a marketing strategy long before your birds reach market age or start laying is key to profitability.

- **Direct Sales:** Selling directly to households, local restaurants, and hotels.

- **Wholesale:** Partnering with egg distributors and meat processors.
- **PoultryWise Branding:** Utilizing business cards, social media marketing, and professional packaging.
