

Feed & Nutrition 3: Feed Efficiency & FCR Optimization

Managing Feed Conversion Ratios and Feed Waste Reduction

CHAPTER 1: UNDERSTANDING FCR METRICS

Calculating Feed Conversion Ratios accurately for both meat and egg operations.

CHAPTER 2: GUT HEALTH & FEED ADDITIVES

Utilizing probiotics, prebiotics, and enzymes to maximize nutrient bio-availability.

Strategy	Operational Action	Expected FCR Improvement
Feeder Height Adjustment	Align feeder level with bird shoulder	Reduces feed spillage by 3-5%
Pelleting vs. Mash	Use high-quality pelleted feed for broilers	Improves intake and digestion efficiency
Water Quality Management	Regular pipe flushing and acidification	Enhances gut health and absorption
