

Farm Management 1: Housing, Brooding & Environmental Control

Shed Design, Ventilation, and Temperature Regulation

CHAPTER 1: POULTRY SHED CONSTRUCTION

Designing open-sided vs. climate-controlled tunnel ventilated housing systems.

CHAPTER 2: PRECISION BROODING PROTOCOLS

Managing floor space, feeder space, and heat distribution during chick arrival.

Age Period	Target Temperature (°C)	Ventilation Priority
Days 1 - 3	32°C - 34°C	Minimum ventilation (Prevent drafts)
Week 2 - 3	26°C - 28°C	Moisture and ammonia extraction
Week 4+	20°C - 22°C	Heat stress prevention & airflow
